# Document Markup Language (DML) Specification 1.0

## **Abstract**

This specification defines the Document Markup Language (DML), a markup language for books, articles, notes and other types of documents. DML is normatively available as a RELAX NG (Appendix A, pg. 20) schema with additional Schematron (Appendix A, pg. 20) assertions.

### Conventions

The keywords *must*, *must* not, *required*, *shall*, *shall* not, *should*, *should* not, *recommended*, *may*, and *optional*, when emphasized, are to be interpreted as described in IETF RFC 2119 (Appendix A, pg. 20).

- A monospaced font is used for code, elements, atributes, tags and value literals.
- An italic monospaced font is used for variables.

#### Element:

When an element (node with type element) is mentioned in the text, it is always preceded by a slash (/) and it optionally has an associated attribute (pg. 1) as a predicate. Element EBNF definition (pg. 2).

Notation for the /section element

/section
/section[@role]

#### Attribute:

When an attribute (node with type attribute) is mentioned in the text, it is always preceded by an at-sign (a) and it optionally has an associated value. Attribute EBNF definition (pg. 2).

```
@role
@role="chapter"
```

#### Tag:

When a tag is mentioned in the text, it is always preceded by a less-than symbol (<) and it is followed by a greater-than symbol (>). Tag EBNF definition (pg. 2).

When a tag is mentioned with some omitted attributes it has an ellipsis symbol (...) preceding greater-than symbol (>).

```
Notation for the start tag <section ...>
```

```
<section role="chapter" ...>
```

Any element or attribute can be modified by a quantifier modificator as follows:

?

Zero or one time.

+

One or more times.

\*

Zero or more times.

Therefore, to indicate that an "status" attribute is optional the expression will be @status?. Or, if a "section" element is repeatable the expression will be /section+.

## EBNF<sup>[1]</sup> definitions

(Draft) TODO: define dml-xpath syntax used in chlidren, attribute and parent definitions.

<sup>[1]</sup>W3C notation (http://www.w3.org/TR/REC-xml/#sec-notation)

## 1. Elements

(Draft) Add /listing for program listing? in cdml?

## 1.1. The /abbr element

The /abbr element represents an abbreviation or acronym.

#### Status

Released

#### Flow

```
Inline (Section 4.3, pg. 19)
```

#### Children

```
( $inline[not( /abbr )] | text() )+
```

#### Attributes

```
( $core.attrs* | $meta.attrs* )
```

#### **Parents**

```
( $block | $inline[not( /abbr )] )
```

The @content attribute (Section 3.2, pg. 18) may be used to provide an expansion of the abbreviation.

The @about attribute (Section 3.1, pg. 18) may be used to provide a resource which contains the expanded form.

@content and @about attributes are mutually exclusive.

#### **Example 1.1-1:** /abbr element with inline expansion

```
Example of <abbr content="Document Markup Language">DML</abbr>'s /abbr element.
```

#### **Example 1.1-2:** /abbr element with remote expansion

```
Example of <abbr about="http://example.org/glossary#dml">DML</abbr>'s /abbr
element.
```

#### (Draft)

## 1.2. The /cell element

...?

## 1.3. The /dml element

The /dml element is the root element for a DML document.

Status

Released

Flow

```
Block (Section 4.1, pg. 19)
```

#### Children

```
( /title, $block[not( /title )]+ )
(: this expression is more accurated but necessary? :)
( /title, $block[not( /title | preceding-sibling::/section )]+, /section* )
```

#### Attributes

```
( $core.attrs* )
```

(Draft) TODO: examples

## 1.4. The /em element

The /em element represents an emphasized text.

Status

Released

Flow

```
Inline (Section 4.3, pg. 19)
```

#### Children

```
( $inline | text() )+
```

#### Attributes

```
( $core.attrs* | $meta.attrs* | @role? )
```

#### **Parents**

```
( $block | $inline )
```

The @role attribute may be used to provide strong emphasized text with strong value.

#### Example 1.4-1: Usage of /em element

```
<em>Lorem ipsum</em> dolor sit amet, consectetur adipisicing elit, sed do <em role="strong">eiusmod tempor incididunt ut labore</em> et dolore magna aliqua.
```

# 1.5. The /example element

The /example element represents an example.

Status

Released

Flow

```
Block (Section 4.1, pg. 19)
```

#### Children

```
( /title?, $block[not( /example )]+ )
```

#### Attributes

```
( $core.attrs* | $meta.attrs* )
```

#### **Parents**

```
( /dml | /note | /section )
```

#### **Example 1.5-1:** Usage of /example element

```
<example xml:id="example-identifier">
  <title>Title of the Lorem Ipsum example</title>
  Lorem ipsum dolor sit amet...
</example>
```

# 1.6. The /figure element

The /figure element is a figure container; it usually contains an illustration or something to be shown graphically.

```
Status
```

Released

#### Flow

```
Block (Section 4.1, pg. 19)
```

#### Children

```
( /title?, $block[not( /example | /figure )]+ )
```

#### Attributes

```
( $core.attrs* | $meta.attrs* )
```

#### **Parents**

```
( /dml | /example | /note | /section )
```

#### Example 1.6-1: Usage of /figure element

```
<figure xml:id="figure-identifier">
  <title>It shown an illustration throught a figure element</title>
  <object src="path/to/illustration"/>
</figure>
```

# 1.7. The /group element

The /group element is a generic table cell container.

#### Status

Released

#### Flow

```
Table (Section 4.2, pg. 19)
```

#### Children

```
( /group+ | /title+ | ( /title?, /cell+ ) )
```

#### Attributes

```
( $core.attrs* | $meta.attrs* | @role? )
Parents
   ( /group | /table )
```

The <code>@role</code> attribute may be used to provide a form to refine the <code>/group</code> element meaning. Allowed values are:

header

A header table group. Table header *must* be the first child of a /table element.

footer

A footer table group. Table footer *must* be child of a /table element.

## 1.8. The /item element

The /item element represents a list item container.

Status

Released

Flow

```
Block (Section 4.1, pg. 19)
```

#### Children

```
( ( /title*, $block[not( /item | /title )]+ ) | ( $inline | text() )+ )
```

#### Attributes

```
( $core.attrs* | $meta.attrs* | @role? )
```

#### **Parents**

```
( /list )
```

(Draft) The functionality of /item[@role="footer"] is too specific for DML? maybe yes. Reevaluate.

The <code>@role</code> attribute may be used to provide a form to refine the <code>/item</code> element when is the last child of a <code>/list[@role="leaded"]</code> element. The only possible value is footer.

## 1.9. The /list element

The /list element represents a list of items.

#### Status

Released

Flow

```
Block (Section 4.1, pg. 19)
```

Children

```
( /title?, /item+ )
```

#### Attributes

```
( $core.attrs* | $meta.attrs* | @role? )
```

#### **Parents**

```
( $block[not( /p | /title )] )
( /dml | $block[$block[not( self::/list )]] )
```

The @role attribute *may* be used to provide a form to refine the /list element meaning. Allowed values are:

ordered

A list which items order is relevant.

leaded

(Review) A list with enforced relation between item title and item content. Like price list.

#### Example 1.9-1: Simple list

```
<list>
    <item>sugar</item>
    <item>salt</item>
    <item>pepper</item>
</list>
```

#### Example 1.9-2: Ordered list

```
<list role="ordered">
  <item>first</item>
  <item>second</item>
  <item>third</item>
</list>
```

#### Example 1.9-3: List with title

```
<list>
  <title>List title</title>
  <item>first</item>
  <item>second</item>
  <item>third</item>
</list>
```

#### Example 1.9-4: Definition list

```
<list>
    <item>
        <title>Dweeb</title>
        Young excitable person who may mature into a Nerd or Geek.
    </item>
        <title>Hacker</title>
            A clever programmer.
        </item>
        <title>Nerd</title>
            Technically bright but socially inept person.
        </item>
        </item>
        </item>
        </item>
        </item>
        </item>
        </item>
        </item>
        </item>
```

#### Example 1.9-5: Definition list with multiple terms and definitions

```
st>
 <item>
   <title>Center</title>
   <title>Centre</title>
   st>
     <item>A point equidistant from all points on the surface of a sphere.</item>
     <item>In some field sports, the player who holds the middle position on the
     field, court, or forward line.
   </list>
  </item>
 <item>
   <title>Color</title>
   <title>Colour</title>
   The property possessed by an object of producing different sensations on the
   eye.
  </item>
</list>
```

```
<list role="leaded">
    <item>
        <title>Sugar</title>
        1 €/u.
        </item>
        <title>Salt</title>
            1 €/u.
        </item>
        <title>Salt</title>
            1 €/u.
        </item>
        <item>
            <title>Pepper</title>
            2 €/u.
        </item>
    </item>
    </item>
```

(Draft)

# 1.10. The /metadata element

...?

## 1.11. The /note element

The /note element represents a generic document note or annotation. It *may* be used as a root element in *(Review) DML islands* in non-DML documents.

```
Status
```

Draft

Flow

```
Block (Section 4.1, pg. 19)
```

Children

```
( ( /title?, $block[not( /title | /note )]+ ) | ( $inline | text() )+ )
```

#### Attributes

```
( $core.attrs* | $meta.attrs* | @role? )
```

#### **Parents**

```
( /dml | /object[parent::$block] | /section )
( /dml | $block[$block[not( self::/note )]] )
```

The @role attribute may be used to provide a form to refine the /note element meaning. Allowed values are:

tip

A suggestion, tip or trick.

warning

An admonition note.

sidebar

A note that is isolated from the main narrative flow.

```
(Draft) /section[@role="aside"] or /note[@role="aside"] or @role="sidebar" ...?
```

footnote

A footnote. Footnotes in paged medias usually occur at the end of the page which cite it.

#### (Draft) TODO: examples

(Draft)

## 1.12. The /object element

The /object element represents a generic embedded media object like images, videos, audio and other types of multimedia files.

#### Status

Draft

#### Flow

When its parent is an inline element or a block element that only allows inline elements its flow is inline (Section 4.3, pg. 19), otherwise its flow isblock (Section 4.1, pg. 19).

#### Children

```
( $block* | ( $inline | text() )* )
Attributes
    ( $core.attrs* | $meta.attrs* | @src | @type? )
Parents
    ( /dml | $block | $inline )
```

The @role attribute may be used to provide a form to refine the /note element meaning. Allowed values are:

```
tip
    A suggestion, tip or trick.
warning
    An admonition note.
sidebar
    A note that is isolated from the main narrative flow.
    (Draft) /section[@role="aside"] or /note[@role="aside"] or @role="sidebar" ...?
footnote
    A footnote. Footnotes in paged medias usually occur at the end of the page which cite it.
(Draft) TODO: examples
(Draft)
1.13. The /p element
...?
(Draft)
1.14. The /quote element
...?
```

# 1.15. The /section element

The /section element represents a generic document section.

```
Status
```

Draft

Flow

Block (Section 4.1, pg. 19)

Children

```
( /title, $block[not( /title )]+ )
```

```
Attributes
```

```
( $core.attrs* | $meta.attrs* | @role? )
```

#### **Parents**

```
( /dml | /note | /object[parent::$block] | /quote[parent::$block] | /section )
```

The <code>@role</code> attribute may be used to provide a form to refine the <code>/section</code> element meaning. Allowed values are:

abstract

A summary or statement of the contents of a document.

part

A part of a book. Parts usually group related chapters in a book.

chapter

#### (Review) A main division of a book.

appendix

An appendix in a document. Appendixes usually occur at the end of a document.

#### (Draft) header
